De Dietrich

CRÉATEUR D'ÉMOTIONS DEPUIS 1684

DE DIETRICH THE ART OF LIVING

"My profession was ignited from a coal-fire stove 40 years ago, and since then I have put my heart and soul into creating cuisines that are creative, close to perfection and delicious.

When De Dietrich, which shares the same perpetual search of excellence, suggested a collaboration, I accepted with great enthusiasm so that together, we can transmit our shared love and passion for fine cuisines. From simple processes to sophisticated techniques, everything is possible and your creativity knows no bounds; thanks to the ultra efficient and high performing kitchen appliances from De Dietrich.

Love, art and technique come together to make fine cuisines".

Pin Jaquez

VIRTUOSITY

As defined by La Maison De Dietrich:
“Transforming raw materials to add elegance and emotion using a high level of technical control and the utmost precision. Demonstrating the very essence of our talent, boldness and creativity in constantly reinventing products that have excellence and emotion ingrained in them, as well as being outstanding culinary products.”

De Dietrich

LA MAISON DE DIETRICH

The kitchen of the third millennium embodies a contemporary and harmonious space, where cutting edge technology meets innovations in design, performances and features.

As a master of innovations, De Dietrich is a brand that is always ahead of its time. De Dietrich is constantly developing solutions for the future, to enhance your lifestyle.

Strong technological know-how, coupled with a heritage of more than 300 years of excellence and passion, has allowed De Dietrich to achieve today's internationally acclaimed brand status.

For over three centuries, know-how, quality, close attention to detail and aesthetics have applied to all of its collections and are the key words of this prestigious De Dietrich brand which is distributed worldwide and designed and manufactured mainly in France. With this 2019 collection, De Dietrich continues to convey an image of a French way of life. Our uniqueness is already recognized through our ovens which have received the prestigious RED DOT Award for their innovative design.

THE LEGACY

◆ Family Legacy

- 1684** A rich banker from Alsace, Johann Dietrich, bought a traditional foundry in Strasbourg.
- 1761** Jean De Dietrich, Johann's grandson, was knighted by King Louis XV.
- 1778** Louis XVI granted official recognition of the De Dietrich hunting horn trademark.
- 1792** Rouget de Lisle song "The Marseillaise" at the home of Baron De Dietrich, the first Mayor of Strasbourg.

1778

1792

◆ Industry Legacy

- 1848** Railway construction.
- 1850** First wood and coal cookers.
- 1968** First built-in kitchen.

1850

◆ Brand Legacy

- 1970** First pyrolytic oven.
- 1978** First induction hob.
- 1980** Introduction of the first multifunction oven.
- 1997** First built-in steam oven.
- 2003** ICS/Chef technology. First gas hob with touch controls.
- 2005** Low temperature professional cooking programme.
- 2007** First colour matrices oven.
- 2008** Continuum, first induction hob with a free area of 40x23cm.
- 2010** Piano, first 100% zoneless induction hob.
- 2013** HoriZone, induction hob without any limit.
- 2015** Chef Tactilium induction hob.
- 2016** Full combi steam pyrolysis.
- 2017** Fully automatic Patisserie mode. ICS hob function.

60CM OVENS

The perfection demanded by De Dietrich for their new collection means that nothing is left to chance. With a delicate balance of expertise and passion, precision and boldness, a harmonious combination of premium materials such as glass, stainless steel and copper, technological performance and unique processes... the new De Dietrich “Fascination” ovens, highly sophisticated in both their design and attention to detail, represent a brand which is keen to offer its users a unique way of life.

Their place in the world of design.

In its bid to build a reputation for this artisan tradition, De Dietrich is looking once again at timeless materials such as iron and copper, as symbols of its heritage. The new design used in its oven collection has been pushed to its limits here in terms of finish, quality, aesthetics and functionality.

Its features are distinctive, such as strong handles mounted on brushed stainless steel or cast iron front panels with the De Dietrich name elegantly depicted, dials set in stainless steel and copper showing intuitive controls, and doors in sophisticated Absolute Black glass, Iron Grey or Pure White, on which the De Dietrich emblem is proudly displayed.

The new ‘Fascination’ collection has been recognised by the Red Dot Award, a prestigious international design and innovation competition. It won the **Red Dot Design Award** in 2017, in recognition of the line's design and concept, and the innovative technology used.

Supporting culinary excellence with technological virtuosity.

The “Chef” Mode: up to 15 dishes. Exclusive to De Dietrich. Fully automatic cooking with the utmost precision.

De Dietrich has integrated an unrivalled functionality into its ovens' programming options: the “Chef” Mode. A product of the very latest technology, this mode allows you to prepare between 9 and 15 of your most frequently-cooked meals automatically. You simply choose the dish on your menu and put it in at the correct shelf level, as recommended by the oven. This exclusive technology is patented by De Dietrich and adjusts all settings automatically: the cooking mode, the ideal temperature and even the cooking time. A sensor constantly analyses the dish's humidity level so that cooking time can be adjusted down to the minute!

DE DIETRICH

The art of successfully preparing all meals as they should be prepared.

Multifunction Plus:

Combined Heat and Fan Cooking functions, exclusive to De Dietrich.

Among the functions offered by the Multifunction Plus, two cooking modes stand out: Combined Heat and Fan Cooking.

With an element surrounding the fan which ensures a perfectly even distribution of heat, the **Combined Heat** function has been specifically designed for moisture retention cooking methods, as used for tarts, quiches or pizzas. This technique also provides some energy savings. The temperature rises very quickly, thus eliminating the pre-heating phase.

The Fan Cooking function.

The Fan Cooking function is the only process that preserves the delicate texture of white meat and the aroma and flavour of foods cooked en *papillote*, and which allows different dishes to be cooked on three levels at the same time whilst preserving the individual aromas and tastes of each.

French Patisserie mode:

14 recipes available.

Excel at an art which is envied worldwide.

Macarons, cannelés, chocolate fondants... if you consider French patisserie to be a key element of culinary art, you no longer need to feel daunted by it. From now on you can count on this special function, exclusive to De Dietrich, to help you skilfully and successfully produce these patisserie classics. Choose from the 14 recipes available for automatic cooking and let the compliments roll in.

Low-Temperature Cooking: 10 dishes.

The utmost respect for culinary tradition.

These De Dietrich ovens are at the forefront of technology, and are equipped with all the tools necessary for creating culinary masterpieces. Used by top chefs, this gentle, even and consistent method of cooking at temperatures lower than 100°C is perfect for delivering particularly tender and flavoursome meat. It is extremely easy to access this programme. All you have to do is make your selection and the oven will then automatically cook the dish as required.

The Culinary Guide: up to 50 recipes available.

Guaranteed high-quality cooking.

After choosing a preprogrammed recipe and entering the weight of the dish, the oven automatically determines the appropriate cooking mode, as well as the ideal temperature and the cooking time required down to the minute. It is a real expert when it comes to helping you with your culinary creations.

“Variable Grill” Function:

up to 4 power settings.

Certain recipes, all of which initially seem simple - such as meringues - actually require a great deal of hands - on work to achieve perfection. By modulating the heat of the grill between 1 and 4, this function helps you to achieve culinary feats on a daily basis.

Drying Function:

Enhancing the flavours of all your meals.

De Dietrich has equipped its new ovens with a function that nowadays it would be difficult to do without. This dehydration process allows you to dry a large number of different foods at a perfectly controlled temperature between 60°C and 80°C, including aromatic herbs, fruits and vegetables. By preventing the build-up of bacteria, it allows you to preserve produce for several months and use it whenever you like; it also preserves essential elements such as vitamins, minerals and flavours.

Sabbath Function:

Inventive and functional.

De Dietrich is breaking new ground in offering three new ovens equipped with a special Sabbath function. This programmable mode allows the oven to function completely independently for 25 hours, or up to 75 hours if required. A flow of electricity maintains a constant temperature of 90°C in the cavity, so that dishes may be cooked or kept warm without needing to use a thermostat. The interior light stays on at all the times, even when the door is closed.

DE DIETRICH

DX3 Display

Connaisseur Screen Programmer.

This interface is home to a simple and intuitive high-definition colour screen which lets you navigate through sectors and submenus: the Greengrocer, the Butcher, the Delicatessen, and so on. Each option is accompanied by a stunningly unique and lifelike illustration. Breathtaking photos are displayed on the screen when exploring the endless preset dishes and recipes in the Chef Mode, Culinary Guide, Low-Temperature, French Patisserie and Drying Function menus.

DX0 Display

White LED Programmer.

This provides a crisp display of all the main functions and cooking settings, such as recommendations regarding oven temperature or the length of resting time.

Applicable to:
DOP7200BM

A real new gem for faultlessly executing all your greatest culinary classics.

Optimised 73-litre volume and outstanding energy performance.

De Dietrich ovens stand out due to their large 73-litre cavity capacity. This space makes it easy to prepare large or wide dishes, with six different shelf levels easily identifiable on the sides of the oven so that you can follow its recommendations and place your cooking dish at the ideal height. The carefully thought-out cavity design and the reinforced wall insulation makes for a shorter pre-heating time and perfect temperature control. As demonstrated by its A+ energy label.

Exceptionally high safety levels.

Cool door with 4 glass panels.

Thanks to a ventilation system that is exclusive to De Dietrich and the use of four glass panels, the oven door never gets hot enough to burn you.

Control Lock and Auto-Stop safety features.

The first allows you to lock the control panel to avoid starting the oven accidentally; the second automatically shuts off the oven after 23 hours if someone forgets to turn it off.

Soft Close Door: the ultimate comfort of soft closure.

This patented system, exclusive to De Dietrich, enables the oven door to gently close itself.

Halogen lighting.

Halogen lighting provides the perfect light - natural, powerful and even. It gives excellent visibility of all levels of the oven, even when there are several dishes being cooked at once.

Three Pyrolytic cleaning modes: the art of preserving excellence.

In order to satisfy even the most exacting of users, our Multifunction Plus ovens are equipped with three Pyrolytic functions for made-to-measure cleaning. The addition of a pyrolysis turbine evenly circulates air all around the cavity, guaranteeing optimal cleaning throughout. With the **Pyro-Turbo** function, the oven is out of action for 2h compared to 1h30 in **Pyro Eco** mode. The **Pyro Express** mode cleans the cavity in 59 minutes flat by using residual heat from a previous cooking process. The exclusive **Auto-Pyro system** automatically sets the time required for pyrolysis between 1h30 and 2h15, depending on the level of dirtiness detected. This cleaning process combines efficiency and economy so that cleaning your oven produces consistently immaculate results.

Drip tray and Basting racks, anti-tip racks and a telescopic rail system. A full set of equipment with a wide range of uses.

A drip tray is included in all ovens. This one has a handle at the front for ease of movement.

On certain models, the drip tray is equipped with two adjustable and removable half racks, specially designed so that you can baste your dish with the cooking juices.

What is more, the racks for resting your dishes on are designed so that they can be brought securely forwards up to three quarters of the way out of the oven.

They are fitted with two feet and an arch at the back which prevents dishes from tipping over.

Depending on the model, the rolling rail system enables you to slide racks and dishes in and out of the oven with the greatest of ease.

Inner walls on which nothing sticks to.

A smooth, highly resistant enamel cavity is exceptionally shiny and durable, as well as being extremely easy to clean.

Steam combination cooking. Tasty, healthy and nutritional.

This steam cooking process does not require any special installation to take place, thanks to the water tank located on the front.

Two cooking applications are offered within the Combined Steam setting: a three-function **Steam Expert mode** and a **Culinary Guide**.

In Steam Expert mode, one of the three functions must be selected, and the temperature, cooking duration and end of cooking time must be set, as well as the steam percentage.

The steam in the oven can be adjusted between 20% and 80%.

With the Culinary Guide “Recipe Mode”, all you have to do is choose from 73 different recipes, of which 38 are Combi Steam recipes, and enter the weight of the dish. The oven will then automatically adjust all settings (cooking mode, temperature, steam percentage and cooking time). With the ability to cook, defrost and reheat without drying food out, the De Dietrich Combi Steam oven is the ideal partner for creating tasty and light dishes, full of vitamins and minerals.

Built-In coffee machine

De Dietrich accompanies you towards a new way of living with a range of various kitchen appliances. This integrated Espresso coffee machine matches the design of both the De Dietrich Platinum & Absolute Black Collection. It combines its functional nature with a remarkably strong emotional association: the same feeling that we share at the end of a meal over the wonderful fragrance and flavour of a great cup of coffee.

Warming drawers

Three warming drawers have been carefully designed by De Dietrich to sit harmoniously with the Fascination ovens: the model DWD7400B coexists perfectly well with the Absolute Black or Platinum Collection ovens, and the model DWD7400W with the white glass door is exactly in line with the Pure White Collection. and don't forget the DWD7400G which matches the Iron Grey Collection seamlessly.

Designed to keep plates, bowls and coffee plates hot, with an adjustable thermostat between 30°C to 70°C, the drawer is food approved and closes gently thanks to a clever breaking system that prevents any rattling of the crockery,

60CM COMBI STEAM OVEN

Now you no longer have to waste time in deciding between traditional and steam cooking, these new De Dietrich ovens offer you both Multifunction Plus and Combi Steam cooking options, using technology inspired by professional kitchens.

Steam combination cooking. Tasty, healthy and nutritional.

This steam cooking process does not require any special installation to take place, thanks to the water tank located on the front of the appliance.

Two cooking applications are offered within the Combined Steam setting: a three-function **Steam Expert mode** and a **Culinary Guide**.

In Steam Expert mode, one of the three functions must be selected, and the temperature, cooking duration and end of cooking time must be set, as well as the steam percentage. The steam in the oven can be adjusted between 20% and 80%.

With the Culinary Guide "Recipe Mode", all you have to do is choose from 73 different recipes, of which 38 are Combi Steam recipes, and enter the weight of the dish. The oven will then automatically adjust all settings (cooking mode, temperature, steam percentage and cooking time). With the ability to cook, defrost and reheat without drying food out, the De Dietrich Combi Steam oven is the ideal partner for creating tasty and light dishes, full of vitamins and minerals.

DE DIETRICH

A COLLECTION
DESIGNED
FOR YOUR NEEDS

45CM OVENS

These ovens have been extremely carefully designed to sit harmoniously with another oven from the collection and present a flawless profile regardless of your chosen layout: having the panel and handle exactly in line, making both installations a height of 45cm, or using front adjustable feet for perfect alignment as part of a horizontal arrangement, for example.

100% Combi Steam Oven.

This gives you the choice between Multifunction Plus, combination steam or 100% steam, with technology inspired by professional kitchens. The process does not require any special installation to take place, thanks to the water tank located at the front of the appliance. There are two cooking applications offered within the Combined Steam setting: a three-setting Expert Mode and a Cooking Guide. In Expert Mode, the oven manages all selected settings electronically. With the Cooking Guide, all you have to do is make your choice and enter the weight of the dish. The oven will automatically determine and manage all settings required to successfully create a healthy and nutritional dish.

Multifunction Plus Pyrolytic Oven.

With a 40-litre volume, this oven can do everything that traditional-sized ovens can do. Included in the ten highly distinctive functions offered by Multifunction Plus is a "Bread" mode, enabling you to lay your table with soft, golden and crusty bread whenever you like; 15 preprogrammed recipes are also provided in the Cooking Guide so you can be sure to succeed, whatever type you are cooking.

Microwave Ovens.

Nothing beats a microwave when it comes to defrosting things in record time, or reheating or cooking two large dishes simultaneously whilst still managing to preserve their flavour and nutritional properties. Combining a grill with four different power settings and Fan cooking, De Dietrich microwaves offer ten different preprogrammed dishes for an entirely automatic cooking process.

Steam Oven.

Preserving the vitamins, minerals, flavour, consistency and colour of food, using steam has created an entirely new way of cooking. This Steam oven means you can use this unique, gentle, healthy and delicate cooking method, which is widely acknowledged and appreciated, with the utmost precision.

45CM OVENS

38CM INTEGRATED MICROWAVES

A convenience aspect that is synonymous with De Dietrich. These microwaves have been carefully designed so that the product does not get in the way of having daily access to a “speedy” cooking method. These integrated models are provided with an integrated installation kit so that they can elegantly slot in above an oven in a standard cabinet recess.

All the delights of cooking under a grill.

The rack provided with the Microwave Grill is collapsible. This means you can tidy it away in a cupboard when not in use.

The pizza pan has been specially designed to suit microwave cooking methods, and produce pizza just as it should be: both crispy and melting all at once.

DE DIETRICH

HOBBS

EXCEPTIONAL
MODULARITY FOR
AN INFINITE CULINARY
EXPERIENCE

INDUCTION HOBS

Having spent over two decades perfecting induction technology, De Dietrich is once again pushing the boundaries of zoneless cooking with HoriZone, a new and unique design-based on modular space. Using groundbreaking innovation to achieve outstanding functionality, De Dietrich is transforming culinary experiences into a precise and accomplished art form with the most luxurious and highly-developed induction hob collection ever designed.

horiZone.

The ultimate accomplishment in revolutionary technology.

A product of the combined technological expertise held by the French engineers at De Dietrich, this 40cm x 23cm flexible cooking space is the most comprehensive cooking zone on the market. Wide, oval, rectangular... it can accommodate cookware of all shapes and sizes, from 23cm frying pans to 40cm oval casserole dishes. The options are endless with horiZone, where all cooking combinations are made possible so that every chef can find an induction hob to suit them and their kitchen.

horiZone Play.

Exceptional flexibility for an infinite culinary experience.

Constantly breaking new ground in their quest for excellence, De Dietrich brings you horiZone Play. This innovative design enables you to use a single hob for multiple different cooking methods, giving you unprecedented taste sensations. Available in 93cm, 80cm and 65cm versions, as well as a 38cm domino, horiZone Play induction hobs offer total modularity for your cooking. Delivered with a chopping board made with wood from the Sologne region of France, they can also be customized with a detachable grill or plancha specially designed to match the dimensions of the horiZone. Those optional accessories have a dedicated cooking mode on the keypad, they sit securely on to the hob surface as they attach to a stainless steel profile at the back of the hob.

A grill and a plancha are available as customisation options on horiZone Play hobs.

DE DIETRICH

horiZone Chef Tactilium.
Endless extra space
and inspiration.

The new **horiZone Chef Tactilium hob** is the jewel in the horiZone range, pushing the boundaries of zoneless cooking even further. This new and unique modular design offers four distinctive cooking modes and allows for endless combinations. Offering totally zoneless, two-zone, and even three- or four-zone combinations, this hob will continue to amaze you with its capabilities.

◇ **In Solo mode**
 The cooking area transforms into one single zone. One single power and time setting is all it takes for you to cook several similar types of dishes.

◇ **In Duo mode**
 The space splits into two separate zones, each measuring 40cm x 23cm. You can then programme a different heat setting and cooking time for each of the zones. Ideal for cooking one large dish on one side and using the other to simmer your accompaniments in several smaller pans.

◇ **In Trio mode**
 The space splits into three different zones, one of which measures 40cm x 23cm. You can choose a different heat setting and cooking time for each. For example, you could sear or fry something in a large dish on the first, cook vegetables in a saucepan on the second, and keep a sauce warm on the third.

◇ **In Quattro mode**
 The cooking area divides into four separate zones. You can adjust each to a different power setting and cooking time.

Cookware recognition.
Quite simply revolutionary.

Inspired by the technology used on the Piano hob, the horiZone Chef Tactilium hob uses this feature to instantly sense cookware on its surface, regardless of where it is positioned. You can therefore move it at any point during the cooking process: assigned settings will automatically follow dishes from one point to another.

The Tactilium screen.
For a unique culinary
experience.

The crowning glories of the Iron Grey Collection, the new **horiZone Chef Tactilium and horiZone Play** hobs combine an elegant appearance with cutting-edge technology. They are equipped with a state-of-the-art control screen. The brightness and contrasts of the touch-sensitive interface makes it easy to read the clear function descriptions that it provides. You programme your cooking processes

by choosing the cooking mode and available power settings, either through touching the screen or using the slider.

The most wonderful culinary creations are at your command.

An exceptionally talented keypad.

The new De Dietrich induction hobs are highly adaptable and flexible when it comes to adjusting their power settings. Their new digital keypad allows you to adjust the power between 1 and 20, with extreme precision and optimum legibility provided by the white LED display.

De Dietrich induction technology here reaches record power levels, with between **2.4 kW and 3.7 kW delivered on traditional zones, and 3.7 kW and 5 kW on 28cm and horiZone zones**. These zones are offered in varying dimensions and can accommodate both round and oval dishes regardless of size, with an innate capacity for adjustment.

Features that are consistently higher performing, for the achievement of excellence.

◇ **ICS:** this recommends the best-suited zone for any given pan so that you get maximum efficiency.

◇ **Elapsed time:** the time since the last heat adjustment was made is displayed on the keypad. This function is perfect for keeping an eye on dishes, and is essential for when you forget to set the timer.

◇ **Recall:** the programmed settings (for heat and time) are saved so that you can retrieve them should the cooking zone turn off unexpectedly.

◇ **Switch - settings tracker:** this function offers you the advantage of being able to move your pan from one zone to another and keep the same settings (cooking style and timer).

◇ **Automatic pan detection:** once it is turned on, the hob automatically recognises a pan placed on any of its zones and displays this to you on the keypad.

When time is scarce: functionality and precision are here to help.

◇ **Boil function:** for pushing the physical limitations of time, with the ability to boil 2 litres of water in record time.

◇ **4 direct access controls for added efficiency:** with a simple touch on the dedicated button, De Dietrich induction hobs provide you with instant access to power settings for searing, simmering, or keeping your dishes warm.

◇ **Timers:** each zone is equipped with its own timer, which you can use to programme the cooking time for between 1 and 99 minutes.

The most exacting of safety standards.

To completely secure the hob whilst the zones are being cleaned, the **Clean Lock** feature allows you to temporarily block all commands for one minute. What is more, all hobs are fitted with 10 security levels which guarantees you trouble-free cooking at all times:

◇ **Anti-Overheating safety feature:** exclusive to De Dietrich, this limits the temperature under the zone to 300°C.

◇ **Anti-Overspill safety feature:** if liquid spills out onto the control panel, the hob turns itself off automatically.

◇ **Keyboard Lock:** this function prevents anyone - particularly children - from turning the hob on accidentally.

◇ **Residual Heat Indicators:** after a long cooking period, the zone surface may stay hot. A light showing the letter "H" displays on the keypad while the temperature remains above 65°C.

◇ **Automatic-Stop System:** if it looks like you might have forgotten about a dish you are cooking, the hob will turn itself off.

◇ **Cookware Detection:** if no pans are placed on the induction hob, LEDs flash until it is started properly, and the system will turn itself off after one minute.

◇ **Small Utensils safety feature:** there is no risk of lids or small utensils placed on zones being used getting hot; the induction surface is only activated when it comes into contact with metallic surfaces over 10 cm in diameter.

◇ **Voltage:** the hob is able to detect low voltages*.

◇ **Connection:** a beep is emitted and electrical circuits are protected in the event of an incorrect connection*.

◇ **Overvoltage:** this valuable safety feature prevents damage to electrical circuits, particularly in the event of lightning*.

*Within limits of tolerance of the French network.

DE DIETRICH

90CM PIANO INDUCTION HOB

Boundless opportunities for culinary creativity.

This unique and expansive cooking area, 2,600cm² in size and totally zoneless, allows you to have up to five dishes on the hob at the same time, whatever their shape and size, and to place them wherever you like on its surface. From now on, how you have it is up to you.

◇ In Solo mode

The entire cooking area is available for you to use with the same heat settings across the board. This mode is perfect for cooking several of the same type of dish using one single setting.

◇ In Piano mode

The cooking area divides into three separate zones. You can assign a different temperature to each depending on what type of cooking process you would like to use - for example, you can keep something warm in one zone, cook something in the second, and boil in the third.

◇ In Expert mode

The entire cooking area is yours to do with as you wish. The hob instantly senses any cookware placed on its surface, wherever it is positioned. You can adjust the heat and the cooking time. The settings that are assigned to pots automatically follow them when you move them from one place to another.

The ultimate accomplishment in revolutionary technology.

Under the elegant black glass surface of the Piano, 36 separate inductors are linked together for easy adaptation to all cooking methods, from the most gentle to the most intense. They combine extreme precision with unrivalled power, and provide a 100% zoneless induction cooking space.

Run your fingers across the Tactilium screen.

Its touch-sensitive interface contains 250,000 colours, providing brightness and contrast which make it easy to read the clear function descriptions provided. Totally interactive, the hob displays the position of pans on the cooking area at all times, as well as the level of power that can be applied with a touch of a finger or by using the slider.

A TOP QUALITY BRAND

STAINLESS STEEL GAS HOBS

The collection of gas and mixed gas and electric hobs brought to you by De Dietrich reflects its commitment to offering excellence in its designs, giving you total control over the energy you use. The highest quality materials are combined with the utmost sophistication, contributing to both the stunning appearance and top-level functionality of all De Dietrich ovens and hoods.

A wide-ranging collection with something for everyone.

There is something to suit everyone's requirements in the most diverse collection designed by De Dietrich to date, with a wide variety of shades and sizes available. Available in 60cm, 75cm and 90cm-wide models, all gas hobs are compatible with each other so that you can create a cooking area that is exactly how you want it.

Guaranteed performance.

The gas burners provided with De Dietrich hobs offer various cooking options and a wide range of heat settings. Leaving pans to simmer on the auxiliary burner or searing meats to perfection on the 3.8kW Triple Crown burner are just two of the many ways that you can use them, with an even distribution of heat consistently ensured throughout the cooking process.

Gas cooking in complete safety across the entire collection.

A thermocouple safety system is located against each burner, which activates as soon as you touch the controller to ignite it. If necessary, this thermocouple instantly and automatically cuts off the gas supply to prevent any leakages occurring should the flame accidentally be extinguished.

Ergonomically-designed knobs.

All knobs have been specially designed to offer the highest levels of ease and comfort during use. Adjusting the heat of the burners is an easy and accurate process.

90CM GAS HOB DPE7929XF

The five burners of this gas hob allow you to undertake even the boldest of culinary experiences, combining the utmost in power and flexibility resulting in your desired cooking expectations.

- ◇ Stainless Steel Hob with 5 Gas Burners:

DE DIETRICH

EXCEPTIONAL
MODULARITY FOR
AN INFINITE CULINARY
EXPERIENCE

DOMINO HOBS

The range of domino hobs in the new De Dietrich collection is one of pure excellence, with each offering the utmost in sophistication and technical innovation. Combine them to create a cooking space that is both unique and original.

A collection of 38cm domino hobs with a unique design.

Just like the different instruments of an orchestra. Each one of the elements of the 38cm collection have their own part to play in creating a perfect ensemble. These appliances can be used either on their own or in conjunction with another. The design and dimensions of the 38cm horiZone Induction domino hobs, available in both gas on glass and Teppan yaki varieties, are a harmonious combination, and will fit beautifully into any set up, in any number of possible arrangements and combinations.

horiZone, creative innovation from De Dietrich.

This cooking zone, already one of the largest and most powerful around, adds yet another dimension to the outstanding performance that is expected from an induction hob: freedom. This modular space enables you to work with one or two classic cooking zones at the front and back of the domino, as well as an ample single zone perfectly designed to accommodate large pans and dishes, all whilst guaranteeing a perfectly even distribution of heat.

The horiZone Play domino. Exceptional flexibility for an infinite culinary experience.

Accompanied by a chopping board made with wood from the Sologne region of France, removable grill and plancha accessories are also available for this domino which are perfectly designed to fit seamlessly onto the horiZone zone. A feature for linking cooking appliances, which can then be accessed directly via the programming control panel, allows you space to get creative and let your culinary talents run free.

Gas domino hobs. Presenting you with a comprehensive skill set.

Gleaming glass surfaces that are crowned with single-burner cast-iron grills.

A TeppanYaki for healthy cooking or parties.

TeppanYaki cooking has been firmly embedded in Japanese culture for centuries, and this Teppan yaki enables you to grill prawns, meat, mini fruit skewers or anything else you like without it sticking, and without needing to use fat or oil on the cooking surface.

DE DIETRICH

HOODS

CONSTANTLY DEVELOPING
HOODS THAT ARE HIGHER
PERFORMING, MORE
INTUITIVE AND QUIETER
THAN EVER

HOODS

With decorative hoods for your wall, island, work surface or ceiling, canopies, retractable and telescopic hoods, the new extraction collection is like nothing you've ever seen before. It has been specially designed by De Dietrich to appeal to lovers of unusual items who are seeking both functional perfection and visual harmony.

A+ rated box decorative hood. Top-class performance.

De Dietrich engineers have achieved major technological success in this sophisticated new collection of decorative hoods. Recognised as having an A+ energy rating, they offer the best possible performance both in terms of energy savings and efficiency.

This excellent performance is the result of a design that has been successfully brought to fruition which combines the efficiency of three stainless steel filters with a highly effective motor and LED lighting; two key elements in significantly limiting noise levels and energy consumption.

Work surface hood. For extraction and cooking that are perfectly in tune.

The height of luxury and sophistication, this evokes emotions that are rarely seen in relation to extraction units. Following initial amazement, its innovative design is met with the greatest admiration. Its uniqueness lies in the way it sits directly next to the hob, showing nothing but a plain flat surface in a subtle, deep black glass.

Ceiling hood. Shedding new light on the concept of well-being.

De Dietrich has joined forces with this new *art de vivre*, which features the best of both visual artistry and technology. The new hood blends seamlessly into the ceiling, drawing air in with both power and discretion. Its large physical size is matched by its abilities. Operated by remote control, this extractor hood also provides you with mood lighting

DE DIETRICH

Peripheral extraction hoods.

Inspired by professional kitchens, this method of extraction is extremely effective. Cooking vapors are drawn in through apertures located around the perimeter of the hood. This system also provides a noticeable reduction in noise levels.

Power equalling efficiency.

A veritable crossroads of the home, nowadays the kitchen is less removed than ever before, with walls being taken down to create open living spaces with dining rooms, living rooms and lounges. With the development of power settings that reach up to 800m³/h, the extraction range brought to you by De Dietrich has become part of this transformation, providing effective and regular air renewal in even the largest of spaces.

ICS technology: hoods that are both intelligent and automatic.

This ICS hood uses sensors to detect heat and vapour, and turns on automatically as soon as it does. It intelligently adapts its speed of extraction, and turns itself off ten minutes after it detects that the last of the vapours have been extracted.

A carefully thought-out design, and top-quality manufacturing.

De Dietrich has developed a collection of hoods which combine design aspects, technology and functionality to the same exacting standards. These standards apply throughout the entire life of the unit, from the day they are installed; with a cleverly-designed mounting and adjustment system, an inner housing for ease of maintenance and cleaning, integrated silencers for the quietest operation possible.

LED lighting. The greatest respect for both the environment and your well-being.

This lighting method stands out as consuming almost 85% less electricity and lasting 20 times as long as an incandescent bulb. The system both efficiently illuminates all the pans on your hob and provides you with soft mood lighting that is ideal for over dinner.

Canopy and telescopic hoods. The utmost discretion.

The **canopy hood** is installed in place of a wall cabinet above the hob. It is fronted with a decorative door that is matched to other kitchen units and provides easy access to all electronic controls for turning on the extractor or activating the lights when opened.

The **telescopic hood** hides away under a wall cabinet, displaying no outward signs of its functional qualities. Its controls are concealed behind an understated stainless steel front panel - full access is gained by simply pulling it towards you. Its new self-close system ensures smooth and gentle operation.

Unparalleled technological prowess in an exceptional minimalistic housing.

Design and technology come together in the programming of our extractor hoods. The new collection is testament to this: the elegant glass front and copper-clad controller contribute to the stunning appearance of our new Platinum, Iron Grey and Pure White ovens.

Inspired by the innovations made to our De Dietrich ovens, hobs and dishwashers, various features are now available on many of the hoods in our collection.

Boost function.

When selected, this feature immediately sets the hood to work at maximum extraction speed for even greater efficiency when large amounts of vapour or cooking aromas are present.

Auto-Stop safety feature.

This precautionary system automatically switches off the extraction or lighting features on the hood after operating for nine hours with no intervention from you.

Eolyse® function.

For use at any time - even when you're not in the kitchen. By activating this function with a simple tap on the touch-sensitive button, Eolyse® silently filters and renews kitchen air in a one-hour process. You can also programme this function to take anywhere between two and nine hours. Depending on your instructions it can - for example - turn itself off at the end of the evening.

Saturation indicator for grease and carbon filters.

In order to ensure the hood works at maximum efficiency, we recommend that grease filters are cleaned and the carbon filter is changed regularly. This warning light illuminates when grease has built up on the filters and they need cleaning or replacing.

Delayed Stop function.

This system has been designed to totally eradicate any residual post-cooking vapours. The hood continues to function for ten minutes after the last speed is selected, then turns itself off automatically. The delayed stop function is automatically activated on hoods equipped with ICS technology.
